

## Diesel upgrade opportunity

With ever increasing numbers of drivers in the UK choosing diesel cars, a significant opportunity exists for XPart AutoService centres to provide diesel upgrades. Omitec has extensive experience in providing performance enhancements for diesel powered Rover 75 and MGZT models via the T4 diagnostic system.

The performance upgrade increases power by more than 10 percent from 118 bhp to 135 bhp and is managed through changes to the engine management software. To perform the vehicle upgrade, T4 users will be required to contact Omitec who will provide a code via the diagnostic system which alters the vehicle's electronic calibrations.

AScs will be given a new order process for this product, which will be launched during August.

## Spotlight on Omitec

XPart would like to take this opportunity to spotlight one of our product partners - Omitec. As MG Rover specialists, all XPart AutoService centres are equipped with T4 diagnostics, the platform developed by Omitec for the MG Rover service network. As well as providing the diagnostic platform, Omitec can provide AutoService centres with a wide range of products and services designed to enhance their capability.

Omitec is recognised as a pioneering international supplier of diagnostic equipment to the automotive industry. As well as offering a wide range of software and test equipment for the aftermarket, the company works closely with and develops bespoke aftersales test equipment and related parts for the world's leading vehicle manufacturers.

Following its merger with Crypton late last year, Omitec is now one of the world's largest independent suppliers of diagnostics and emissions test equipment. The company employs more than 400 people with over half of its staff being qualified engineers. The company's headquarters

are located in Devizes in the UK, situated alongside its dedicated manufacturing facility, but it has a global presence and has recently announced the opening of a new factory and offices in Shanghai. Earlier this year, the company also announced further growth with the acquisition of P-TEC Automotive, an OE supplier of electrical and electronic consultancy services.

### Omitec's Comprehensive product offering

Products developed by Omitec are currently used widely within the XPart AutoService centre network. As well as the T4 diagnostic kit, Omitec manages the collation of data and technical

information contained on the RAVE software disk.

RAVE was last updated in August 2006 and the next release is due imminently. This set of five DVD's is offered exclusively to XPart AutoService centres and contains essential information for the servicing of MG Rover vehicles, including workshop manuals, wiring diagrams and technical bulletins. There is also a useful update on the latest fixes for known problems and faults.

Building on its excellent knowledge of all OEM systems, Omitec provides a T4 upgrade kit giving AutoService centres the capability to expand into all-makes servicing. The hand held unit can be used standalone or via the Techcenter software which can be installed on users' existing T4 laptop, and allows users to connect to a wide range of vehicles from more than 25 manufacturers including Ford, Vauxhall and Volkswagen. Some of the systems covered in its 950 page application list include engine management, ABS, airbag, climate control and automatic gearbox.

• The T4 Diagnostic Kit can be upgraded to connect to a wide range of vehicles

## Your chance to win an XPart mini-fridge

Included in the latest edition of XtraDeal, the XPart All-Makes promotional publication distributed by XPart Wholesalers, is a fax back competition. Simply answer the three easy questions, complete the form and fax it back to 01455 826603 to give yourself a chance of winning an XPart mini fridge and a £10 gift voucher that will enable you to fill it with the drink of your choice.
